Your store, under control

A practical guide to the application at http://localhost:4200

Set up your catalog.
Track every stock change.
Review sales and expenses.

How to use this guide

Follow the setup chapters first, then use the inventory, sales and reporting chapters for daily operations. Each chapter includes screen references. English instructions retain the Greek labels shown in the app.

02	Sign in and find your way
05	Create brands, categories, employees and supplies
08	Build reusable variant templates
10	Create products and set their prices
12	Receive, count and adjust stock
15	Review sales and record expenses
18	Export reports and resolve common issues

> Scope: the browser-based admin dashboard. Checkout takes place in the separate POS client. Instructions were checked against the project source and screenshots captured from the running app with the supplied test account. No store records were changed.

Sign in & navigate

Start with an administrator account.

```
http://localhost:4200/login
```

1. Open **http://localhost:4200** in your browser. If you are signed out, the app takes you to **Admin sign in**.
2. Enter your administrator **Email** and **Password**, then select **Sign in**.
3. Use the left sidebar to open each management screen. Select **Sign out** in the header when finished.

> An employee code is for the POS client. Admin sign-in requires an account with an active OWNER profile and a store assignment.

Use the dashboard for a daily overview

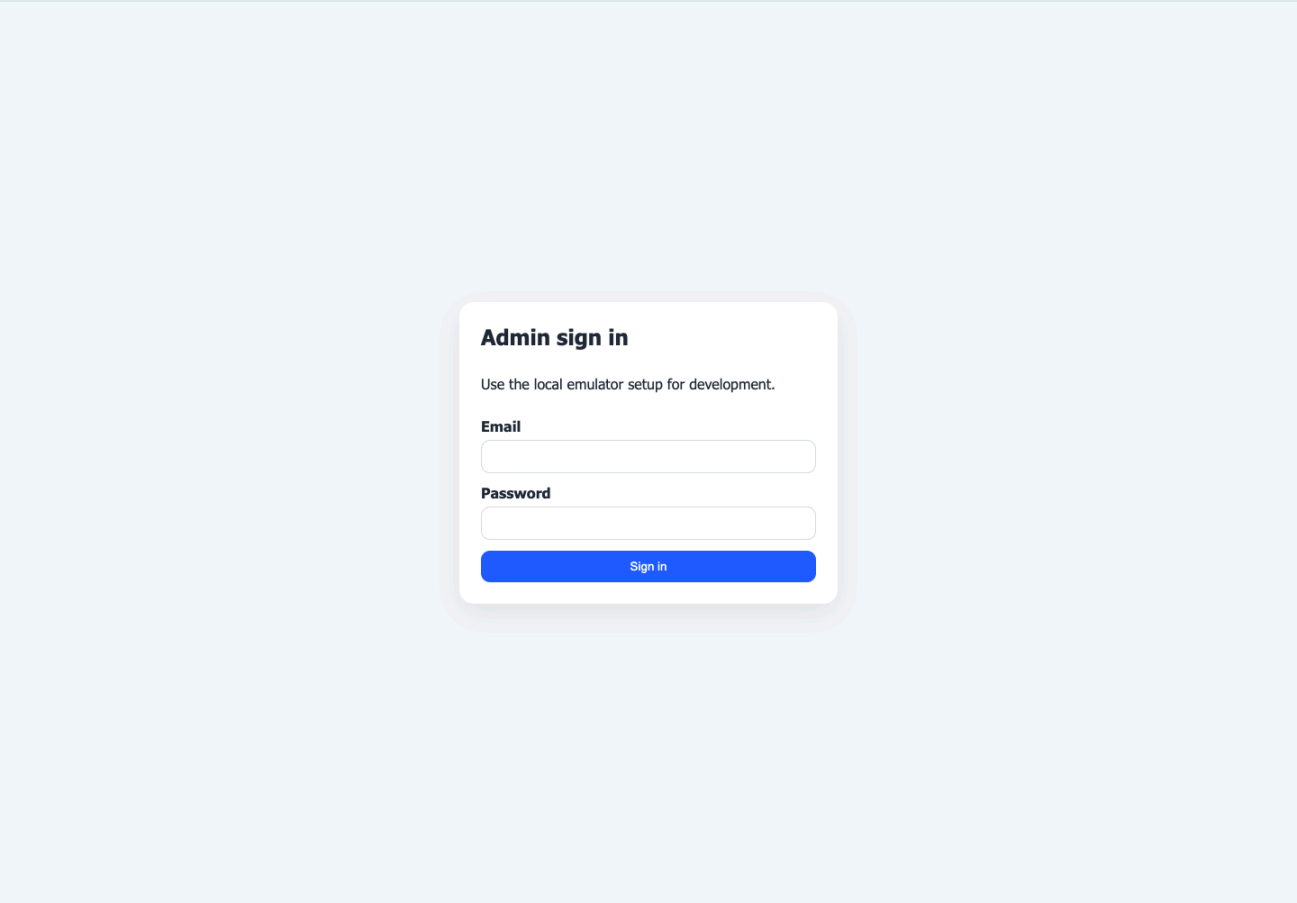

Πίνακας Ελέγχου shows today's completed sales, order count, average receipt, seven-day sales, low stock and recent orders. Select **Ανανέωση** to refresh.

Sidebar label	What you do there
Προϊόντα / Παραλλαγές	Products / reusable sale formats
Μάρκες / Κατηγορίες	Brands / product categories
Υπάλληλοι / Αναλώσιμα	Employees / packaging supplies
Απόθεμα / Κινήσεις Αποθέματος	Balances / stock history and entry
Ιστορικό / Αναφορά Πωλήσεων	Order details / sales reports
Έξοδα	Employee expenses

> The dashboard also contains emulator test-data controls. They create records; they are not required for normal daily use.

Sign in

`http://localhost:4200/login`

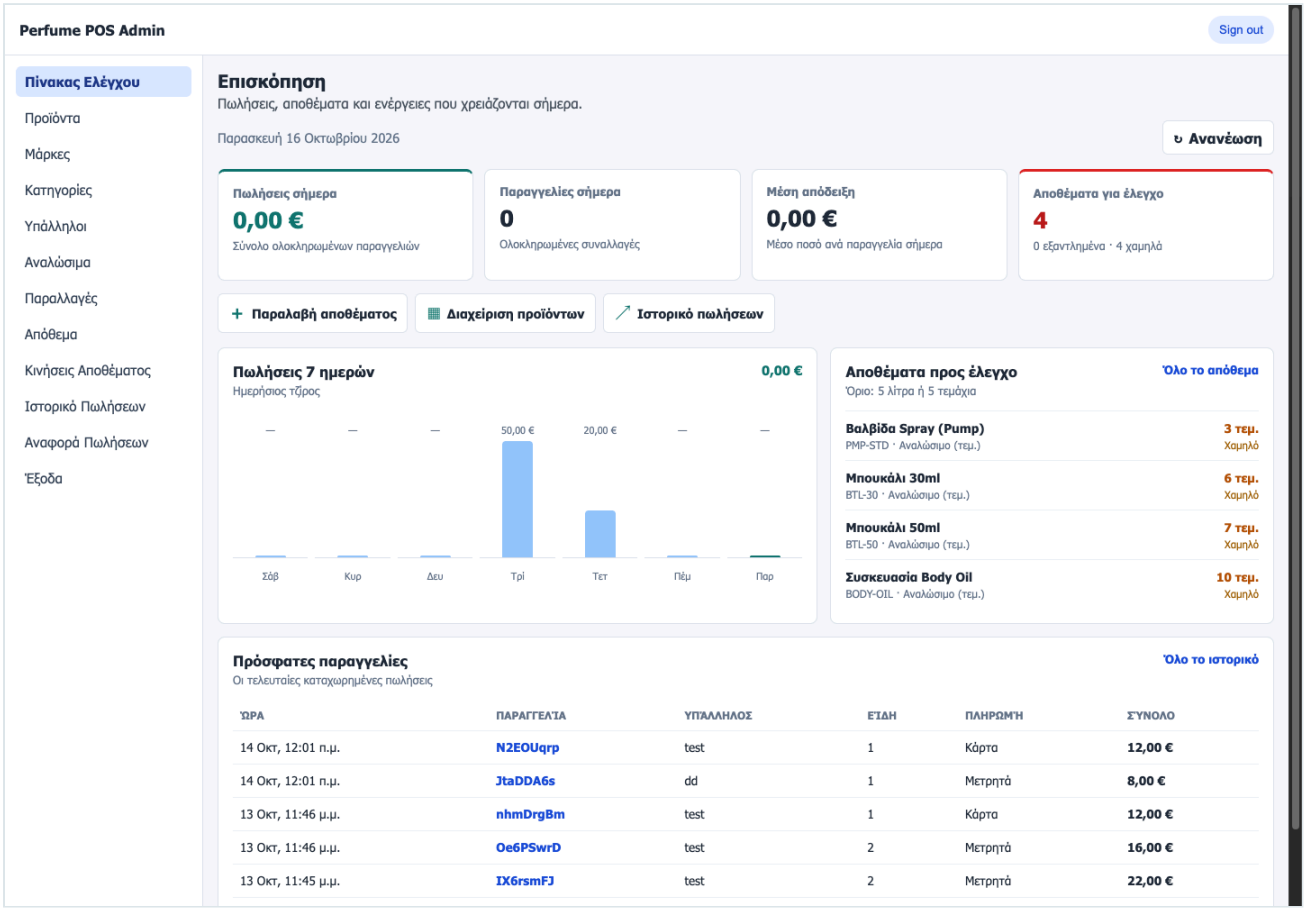

Enter Email and Password, then select Sign in. The left sidebar appears after authentication.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Daily overview

`http://localhost:4200/dashboard`

Review today’s sales and low-stock cards at the top. Use the shortcuts to receive stock, manage products or open sales history.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Prepare your store

Create the records that products and recipes will use.

1 · Brands and categories

Open **Μάρκες** (/brands). Enter **Όνομα μάρκας**, optionally add a code, leave **Ενεργή** selected and click **Δημιουργία μάρκας**. Repeat in **Κατηγορίες** (/categories) using **Όνομα κατηγορίας** and **Δημιουργία κατηγορίας**.

At least one active brand and category are needed before creating a product. Use the search field to locate existing records.

2 · Employees

Open **Υπάλληλοι** (/employees). Enter **Όνομα υπαλλήλου** and **Κωδικός υπαλλήλου**, select the active checkbox, then click **Δημιουργία υπαλλήλου**. The employee code is used to enter the POS.

The same screen has **Έγκριση ακύρωσης παραγγελίας**: enter and confirm a six-digit manager code, then select **Ορισμός κωδικού**. The POS requests this code before cancelling a sale.

3 · Packaging supplies

1. Open **Αναλώσιμα** (/consumables), then **+ Νέο Αναλώσιμο**.
2. Enter the supply name, optional code, unit and optional cost price. Keep the active checkbox selected.
3. Select **Δημιουργία Αναλωσίμου**. Repeat for bottles, caps or other materials used in your recipes.

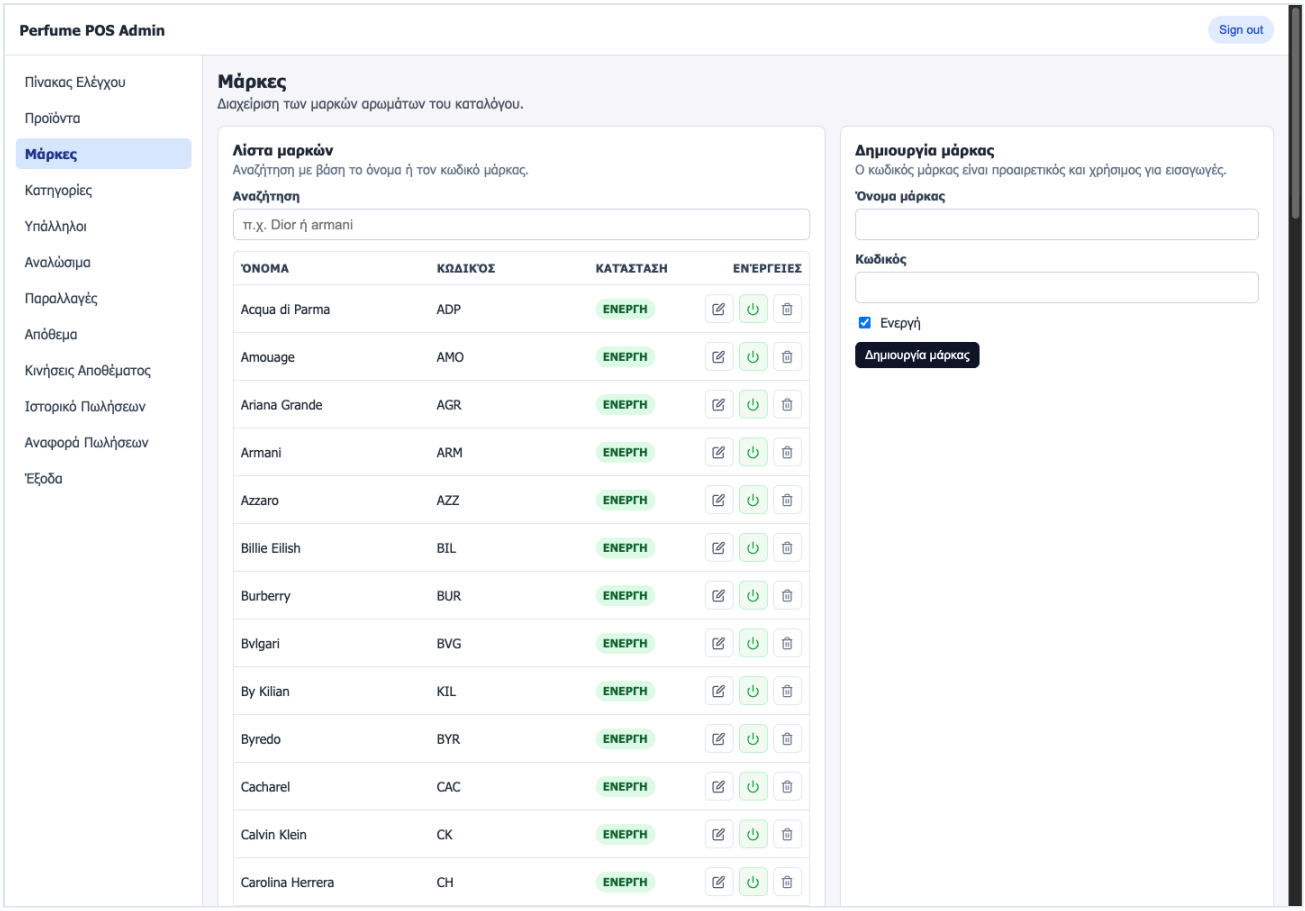

> Example setup: create a “Demo Brand”, a “Perfume” category, and a “30 ml bottle” supply. These are tutorial examples; enter them only in a suitable training store.

Checkpoint

Confirm that the new records appear in their lists and show an active status. Create supplies before building a variant that consumes them.

Create a brand

`http://localhost:4200/brands`

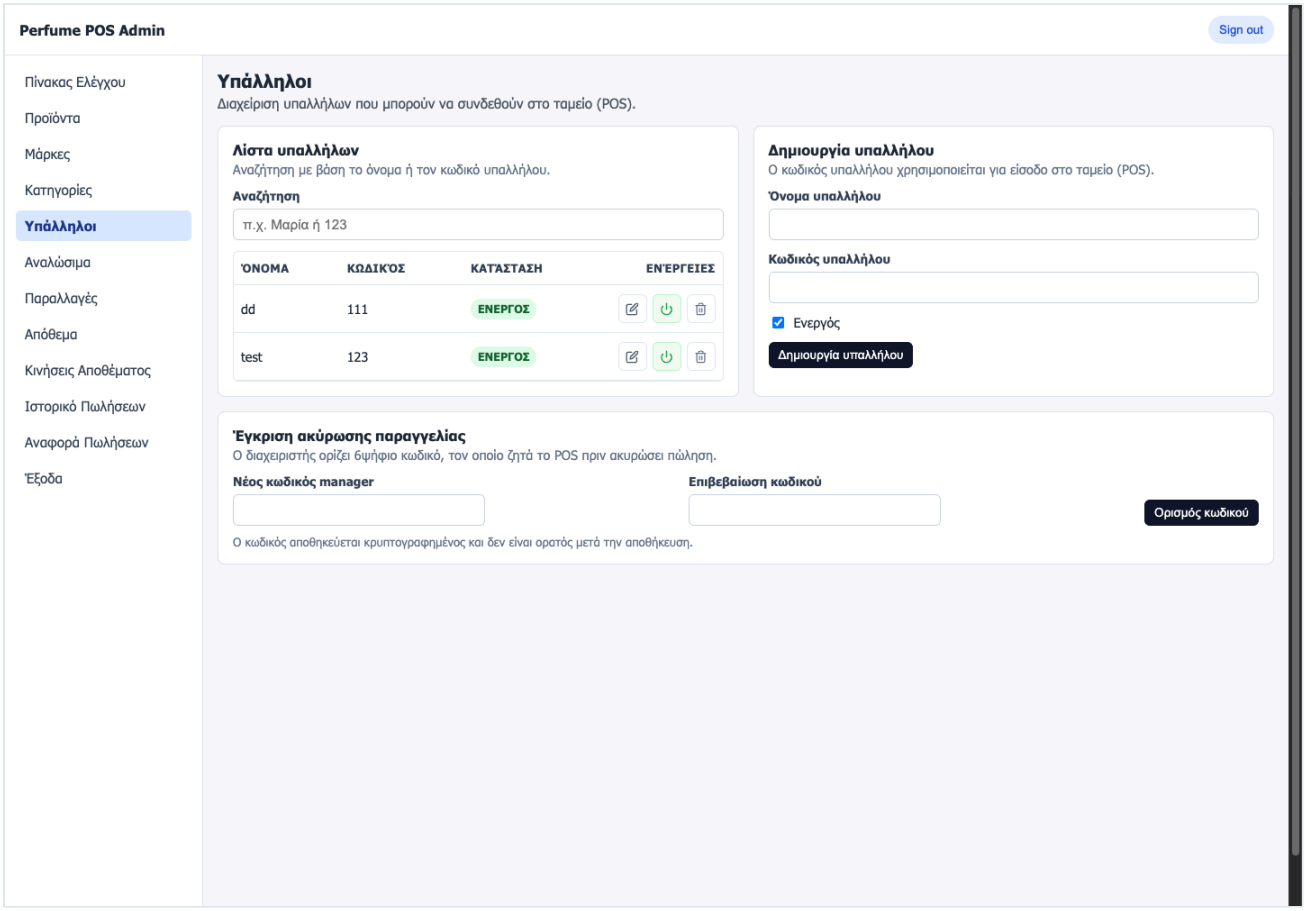

Search existing brands in the list. Use the creation form to enter a name and optional code, and keep the brand active.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Employees & approvals

`http://localhost:4200/employees`

Create employees with a name and POS code. The manager approval code is configured separately on this screen.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Build variant templates

A variant defines a sale format, recipe and suggested price.

```
http://localhost:4200/variants
```

1. Choose **+ Νέα Παραλλαγή**. Enter **Όνομα Παραλλαγής**, optional code, total size and unit.
2. Choose **Τύπος Συσκευασίας**: **Χύμα (BULK)** for a recipe, or **Συσκευασμένο (PACKAGED)** for a ready-made item.
3. Enter the selling price and, if relevant, cost price. For BULK, enter base and essence amounts in **ml**.
4. For BULK, select the required **Αναλώσιμα Συσκευασίας** and specify how many of each are consumed.
5. If offering a special bottle, enable **Δυνατότητα Επιλογής Special Μπουκαλιού**, select its supply record and set the extra charge.
6. Keep **Ενεργό** selected and click **Δημιουργία Παραλλαγής**.

Worked example · 30 ml refill

Field	Training value
Name / size / unit	Demo 30 ml / 30 / ml
Packaging	BULK
Base / essence	25 ml / 5 ml
Packaging supply	1 × 30 ml bottle
Suggested selling price	€10.00

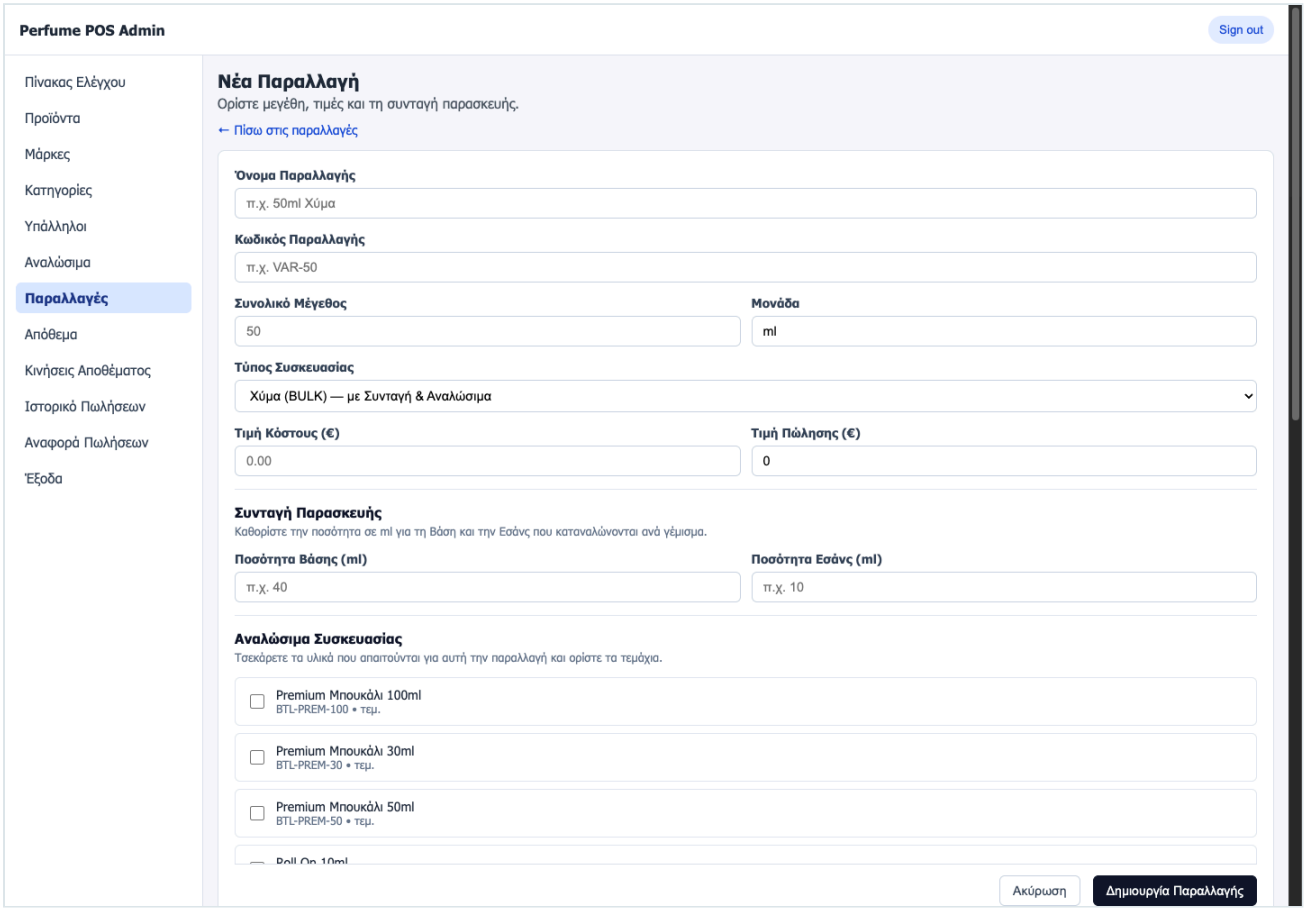

> The example values are illustrative. A recipe uses ml; stock entry for liquids uses litres. A product selects compatible templates and can have its own price for each one.

Checkpoint

Return to the variants list. Search by name or code and verify the size, packaging, recipe and selling price.

Reusable sale formats

`http://localhost:4200/variants/new`

Set size, unit, packaging and price. For BULK formats, configure base, essence and packaging supplies before saving.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Create your first product

Attach compatible variants and decide how they appear at checkout.

```
http://localhost:4200/products/new
```

1. Open **Προϊόντα** and select **+ Νέο Προϊόν**.
2. Enter **Κωδικός Προϊόντος** and **Όνομα Προϊόντος**; select a brand and category.
3. Set **Κατηγορία Συσκευασίας**: BULK tracks liquid volume; PACKAGED tracks pieces. Set gender if needed.
4. Optionally enter **Συστατικά (για την ετικέτα)**. The field allows up to 500 characters and the interface requests uppercase, comma-separated ingredients.
5. Under **Παραλλαγές προϊόντος**, select the available formats. Set each selected variant's **Τιμή Πώλησης (€)** and optional **Τιμή Κόστους (€)**.
6. Expand **Σειρά εμφάνισης στο POS**. Drag the selected variants or use the arrow buttons to order them. The first variant is selected automatically at the POS.
7. Keep **Ενεργό Προϊόν** selected and click **Δημιουργία προϊόντος**.

Find and maintain products

In the product list, search by code, name or brand, or filter by category. Open an existing product's edit action to update its details and select **Αποθήκευση αλλαγών**.

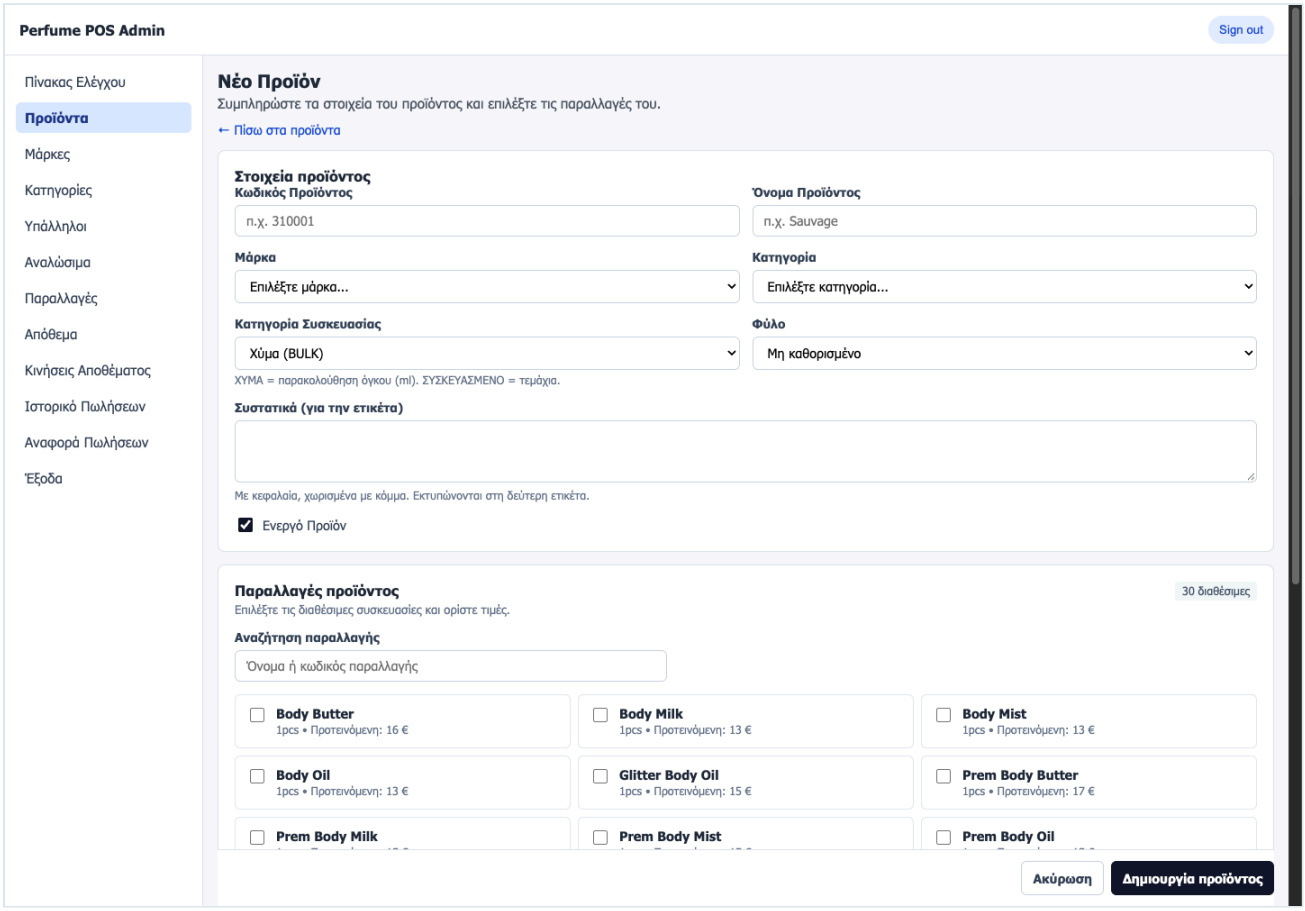

Assign a variant to several products

Select product checkboxes in the list. Choose **Παραλλαγή προς ανάθεση** and click **Προσθήκη στα επιλεγμένα**. Review the result message and check the affected products.

> Checkpoint: confirm the product's code, active status and number of variants in the list. Creating a product is separate from receiving its stock.

Product details & variants

`http://localhost:4200/products/new`

Complete the product details first. Below them, select compatible variants and set prices; the save action appears at the bottom.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Receive & correct inventory

Choose the stock mode carefully: the meaning of the number changes.

`http://localhost:4200/stock-movements/new`

1. Open **Κινήσεις Αποθέματος**, then **+ Νέα κίνηση**.
2. Select the movement mode from the tabs below.
3. Search by item code or name and choose a suggestion. Use **+ Επιλογή αναλωσίμων** to select packaging supplies. You can include several items.
4. Enter the quantity for every relevant row. Liquid fields use **L**; piece fields use **τεμ.**. Check **Τρέχον** and the calculated **Νέο υπόλοιπο**.
5. Enter **Αιτιολογία** (reason). It is optional for purchases and required for adjustments or losses. Fix any row errors, then select **Καταχώριση**.

Mode	What to enter	Example
Παραλαβή Receipt	Quantity received; adds stock	Current 2 L + received 1 L = 3 L
Διόρθωση / Απογραφή Count / adjustment	Actual counted balance	Current 2 L; enter 1.8 L → new 1.8 L
Απώλεια Loss	Quantity lost; subtracts stock	Current 2 L − lost 0.2 L = 1.8 L

> 1 litre = 1,000 ml. To receive 500 ml, enter 0.5 L. In count mode, enter the actual balance, rather than the difference.

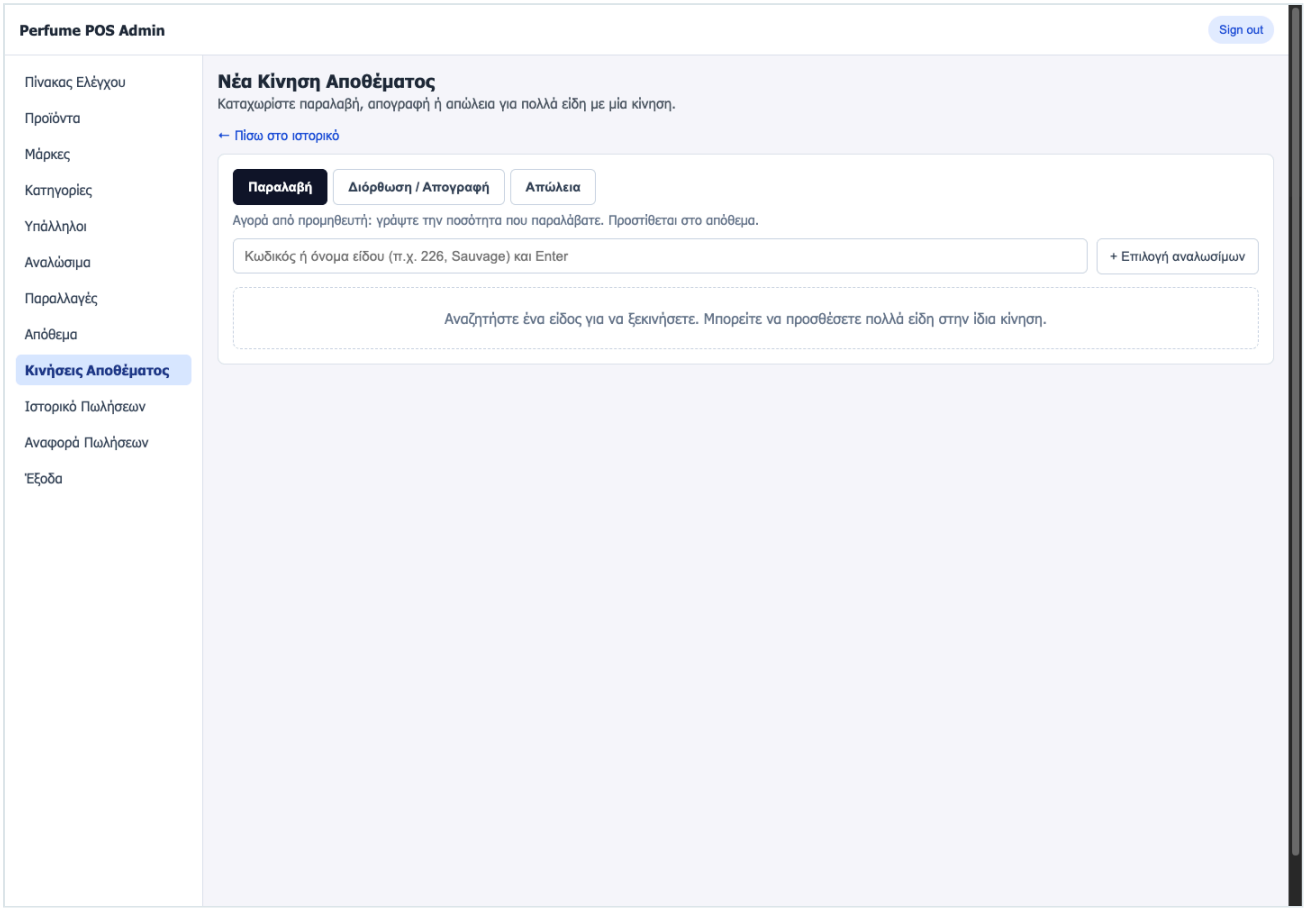

Verify the result

Check the saved movement in the history. Use **Συναλλαγές** for grouped events and **Αναλυτικές κινήσεις** for individual changes. For an order event, select **Προβολή** to see stock effects.

Open **Απόθεμα** (/inventory). Search for the item and confirm the available quantity. Adjust the low-stock thresholds, item type or **Μόνο χαμηλό απόθεμα** filter to focus your review.

Choose a stock movement

`http://localhost:4200/stock-movements/new`

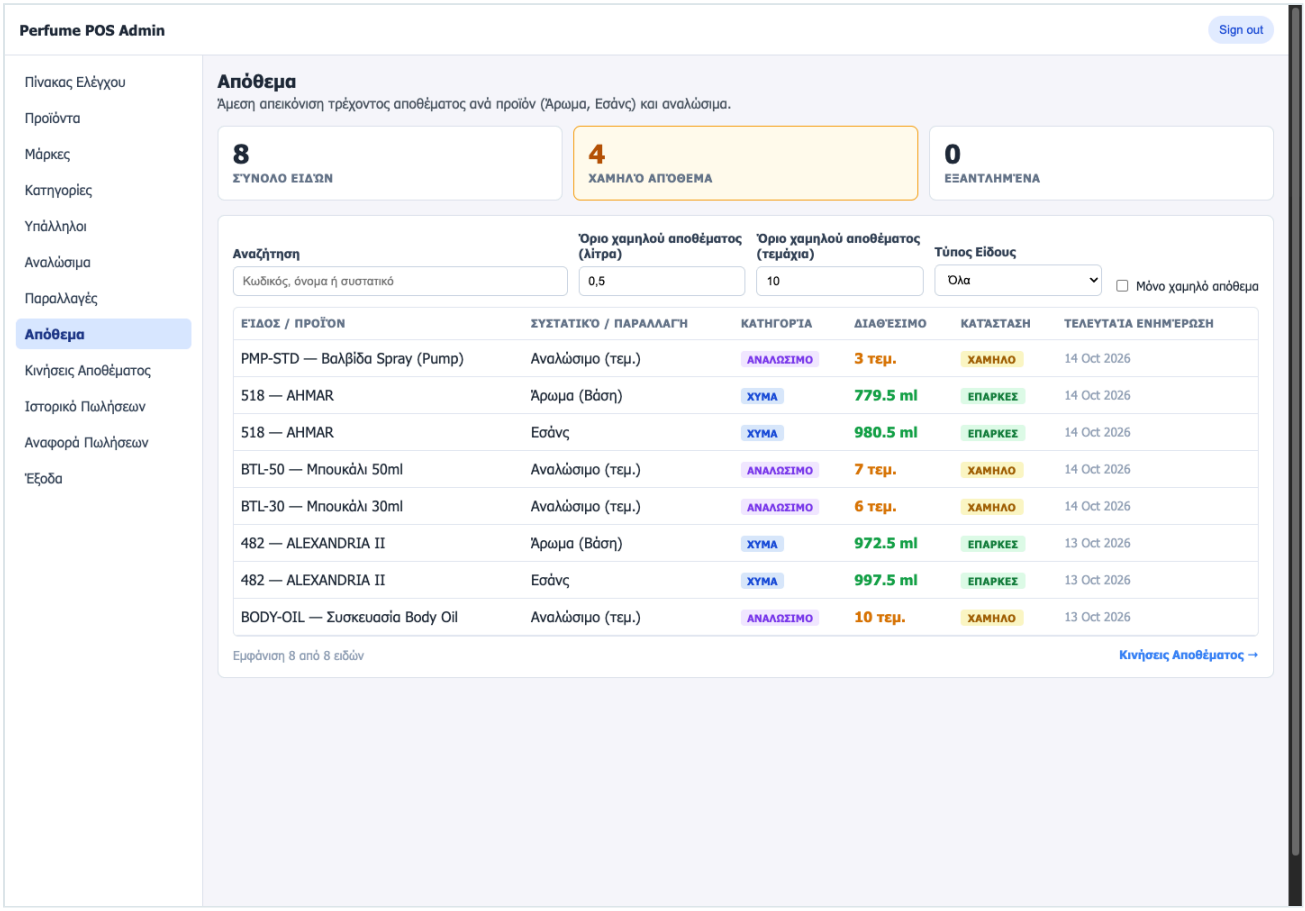

Select receipt, count or loss before searching for an item. After selecting an item, enter quantities and check the calculated balance.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Check available stock

`http://localhost:4200/inventory`

Use search, type and low-stock filters to focus the list. Check the available quantity and unit for each item.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Review sales & expenses

Trace orders and keep employee spending visible.

Inspect an order

```
http://localhost:4200/sales-history
```

1. Open **Ιστορικό Πωλήσεων**. Search by employee name or order ID.
2. Check the date, employee, item count, total and status: **ΟΛΟΚΛΗΡΩΜΕΝΗ** means completed; **ΑΚΥΡΩΜΕΝΗ** means cancelled.
3. Select **Αναλυτικά** beside an order. Review each product, variant, quantity, unit price and line total. A special-bottle indication appears when applicable.
4. Select **Απόκρυψη** to collapse the details. Use stock movement history when you need to inspect the related inventory changes.

Record an expense

```
http://localhost:4200/expenses
```

1. Open **Έξοδα**. Select an active **Υπάλληλος**.
2. Enter **Ποσό (€)**, choose **Μετρητά** (cash) or **Κάρτα** (card), and enter a description.
3. Select **Προσθήκη εξόδου**.
4. Filter by employee and **Από** / **Έως** dates, then select **Ανανέωση**. Confirm the new entry and the total, cash and card summaries.
5. To change an existing expense, use its edit action, adjust the available fields and select **Αποθήκευση**. Select **Άκυρο** to leave the edit.

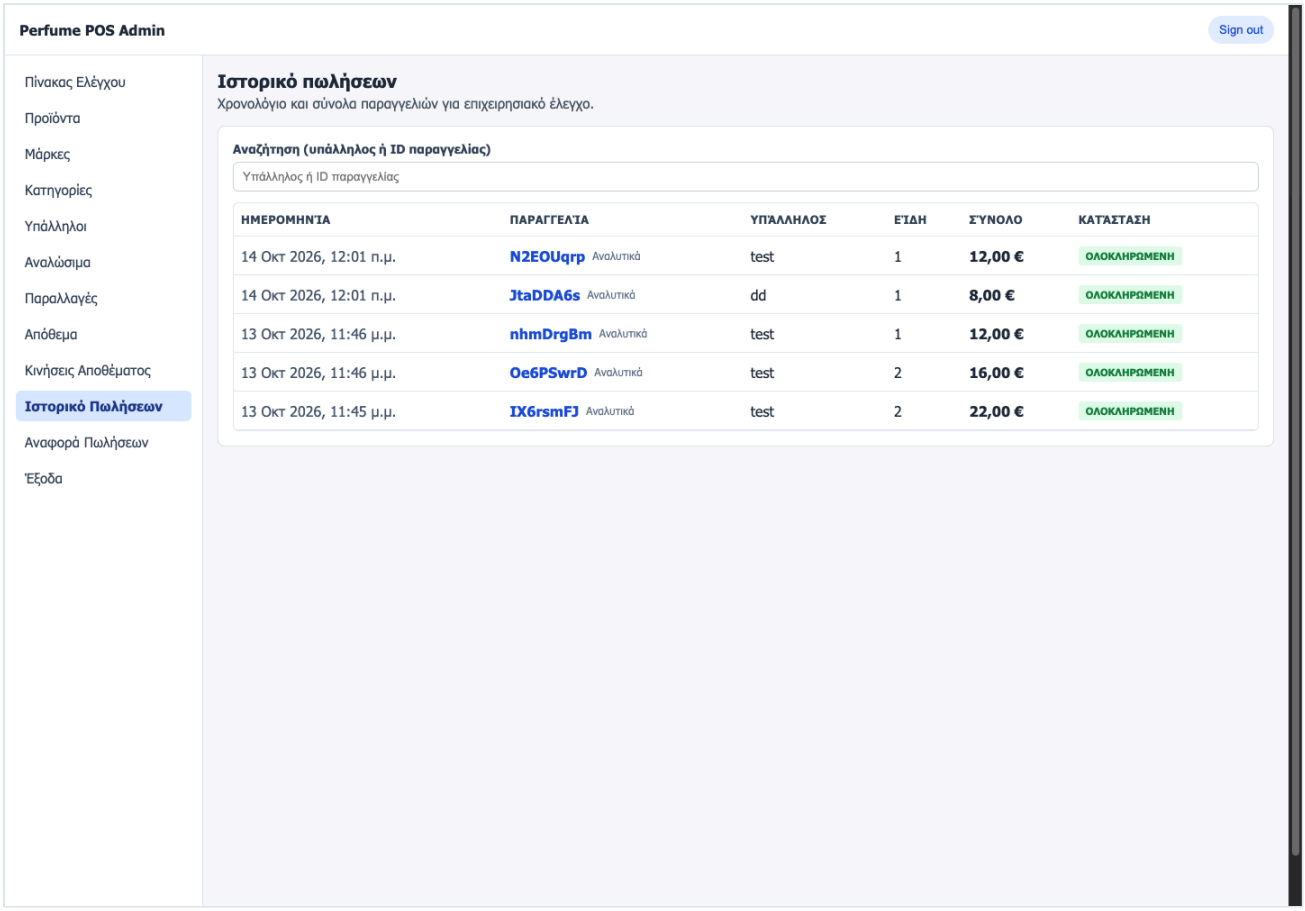

> Training example: a €12 cash expense for packaging supplies should increase the expense total and cash expense total by €12 within the selected period.

Daily review

Compare recent orders with the sales history, review unexpected stock movements, record expenses against the appropriate employee, and then generate the report for the same date range.

Inspect sales

`http://localhost:4200/sales-history`

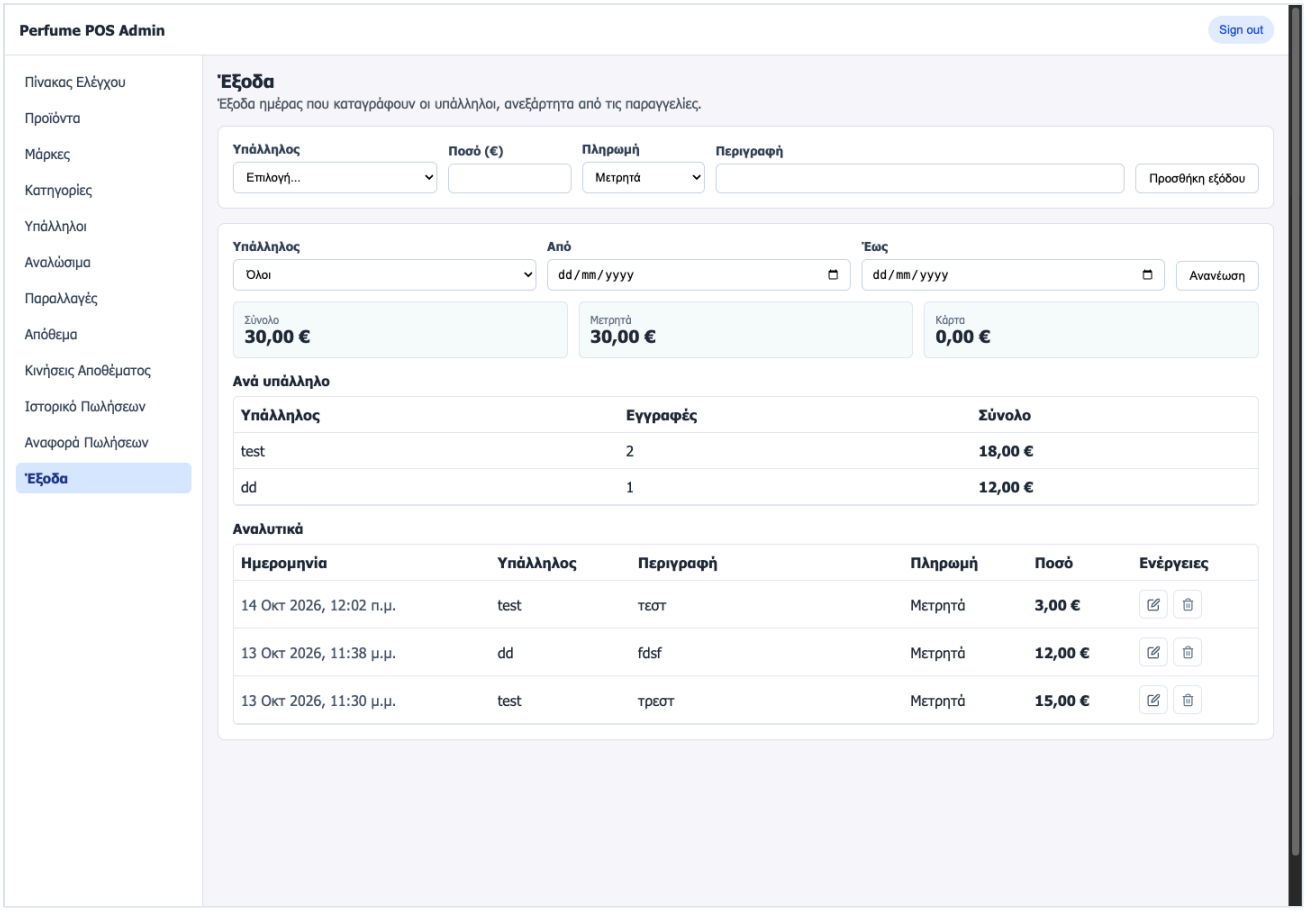

Search by employee or order ID. Select Αναλυτικά beside an order to expand its line items.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Record employee expenses

`http://localhost:4200/expenses`

Select an employee, amount, payment method and description. Use the date filters to review totals and existing entries.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.

Reports & quick fixes

Export a sales summary, then close out your session.

```
http://localhost:4200/sales-report
```

1. Open **Αναφορά Πωλήσεων**. Set **Από** (from) and **Έως** (to) for the reporting period.
2. Review the daily employee rows and **Σύνολο ημέρας**. Columns separate cash sales, card sales, cash expenses and card expenses.
3. Select **Εκτύπωση / PDF**. In your browser's print dialog, choose **Save as PDF** and save the report.
4. For a spreadsheet, select **Εξαγωγή CSV**. When importing, choose a semicolon separator and the appropriate decimal-comma settings.
5. Select **Sign out** when your review is complete.

> **Καθαρά μετρητά** = cash sales − cash expenses. This is a cash subtotal, not a full profit calculation. Example: €100 cash sales − €12 cash expenses = €88 net cash.

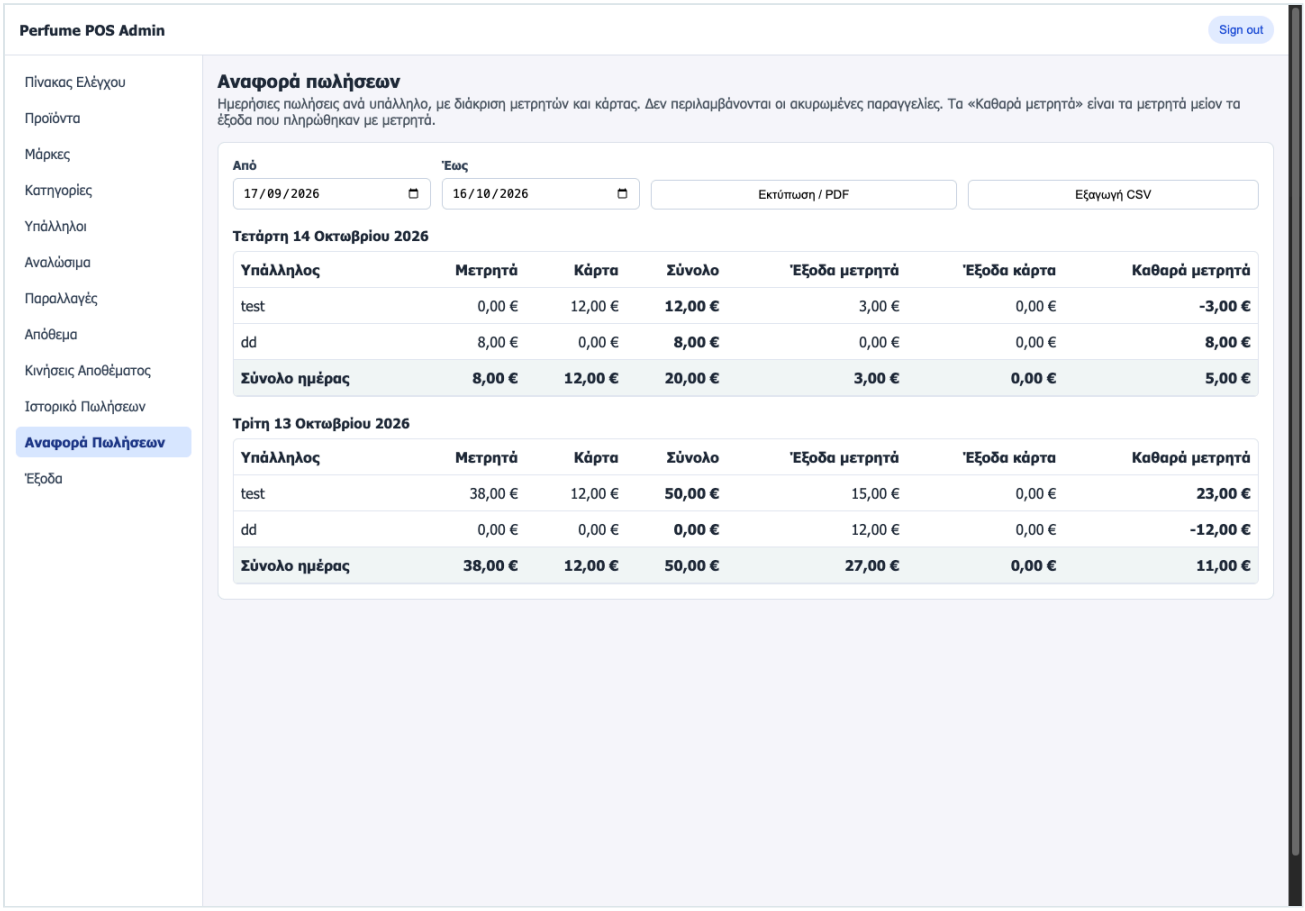

Common issues

Problem	Next step
localhost:4200 does not open	Ensure the local dashboard server is running on this computer. In the project, run npm start from apps/admin-dashboard with dependencies installed.
Sign-in fails	Check email and password. Ask the administrator to verify the account's active OWNER profile and store assignment.
Cannot create a product	Create an active brand, category and variant template first. Check required fields and select compatible variants.
No matching variants	Check the product's packaging type and clear the variant search.
Stock entry cannot submit	Correct flagged rows, check units and provide a reason for adjustment or loss.
List or report appears empty	Clear search and filters; check the date range. Read any loading or connection error shown on screen.

Prepared from the local admin dashboard source on 16 October 2026. Routes, labels and calculations reflect this project version. Example records and amounts are illustrative.

Export the sales report

`http://localhost:4200/sales-report`

Set the period with Από and Έως. Review the employee and daily totals, then select Εκτύπωση / PDF or Εξαγωγή CSV.

> Follow the instructions on the preceding tutorial page. This is an actual capture of the running app; displayed records and totals will change with your store data.
